

Manual

FIS Incremental Encoder

Applications

- Speed and position feedback for high speed spindles, motors, CNC machines

General Information

- Contactless scanning of rotating position and speed.
- Compact design for used in limited space.
- Contact free detection without any mechanical wear problem
- High protecting class IP68.
- Sensing gear wheel from module 0.4 , 1.0
- High response, up to 100,000 rpm

■ Specification

	1 Vpp (A)
Power supply Vcc (DCV)	5 V $\pm$ 5%
Load current (open output)	$\leq$ 60 mA
VOH (open -output)	N/A
VOL (open -output)	N/A
Output signal type	Differential Analog (1 Vpp)
Max. Output signal frequency	$\geq$ 150 KHZ
Output signal amplitude	$\geq$ 1 Vpp
A 、 B phase shifting	$\leq 90 \pm 10^\circ$
Sensing gap	0.15 $\pm$ 0.03 mm
Operating temperature	-20°C ~ 100°C
Protection rating	IP 68
Approx weight scanning head (g)	90 $\pm$ 5%
